We've always believed that only through quality can there be economy. For that reason we work hard and smart to provide all our products the protection they need to reach the job site in good condition. How much is a tank lever worth to you if it comes damaged because it wasn't packaged correctly? Our best features are our ears. We listen to you!

THERE IS A DIFFERENCE.™

	RUN	OFFSET	COT A
	TRAVEL	OFFSET	CSC A
	C	SPREAD	TAN 1/2 A

ROLLING OFFSET

In the rolling offset depicted in drawing R, the plane of the travel determines that the diagonal O is the true offset. The following are two methods of finding the travel and run:

(1) Manual Method:

Mark off the roll and set on a steel square as shown in drawing S. The straight line distance is dimension O which is to be read from the tables on preceding pages in this chapter.

(2) Mathematical Method:

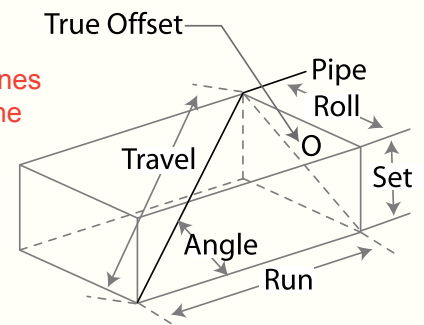

The same basic formula can be applied to any offset problem by interchanging the terms as follows:

$$O = \sqrt{(\text{Roll})^2 + (\text{Set})^2} \text{ and } O^2 = (\text{Roll})^2 + (\text{Set})^2$$

The same basic formula can be applied to any offset problem by interchanging the terms as follows:

$$\text{Travel} = \sqrt{(\text{Offset})^2 + (\text{Run})^2}$$

Thus, for the offset above, $\text{Travel} = \sqrt{(O)^2 + (\text{Run})^2}$

R

S

WATER BASICS

1 ft.³ of water contains 7.48 gal., 1,728 in.³, and weighs 62.48 lb.

1 ft.³ of ice weighs 57.2 lb.

1 gal. Of water weighs 8.33 lb. And contains 231 in.³ or 0.1337 ft³

1 lb. Of water equals 27.72 in.³

One BTU is the heat needed to raise one pound of water degree F.

1 ft. of water equals 0.434 psi

2.31 ft. of water equals 1.0 psi

The height of a column of water, equal to a pressure of 1.0 psi, is 2.31 ft.

To find the pressure in psi of a column of water, multiply the height of the column in feet by 0.434

The average pressure of the atmosphere is estimated at 14.7 psi so that with a perfect vacuum it will sustain a column of water 34 ft. high

Water expands 1/23 of its volume when heated from 40° to 212°F.

Water is at its greatest density at 39.2° F

The friction of water in pipes varies as the square of the velocity.

To evaporate 1 ft.³ of water requires the consumption of 7½ lb. Of ordinary coal or about 1 lb. Of coal to 1 gal. Of water.

1 in.³ of water evaporated at atmospheric pressure is converted into approximately 1 ft.³ of steam.

FIXTURE-UNIT RATINGS

Fixture	Rating
Lavatory	1
Bathtub	2
Shower	2
Residential Toilet	4
Kitchen sink	2
Dishwasher	2
Laundry tub	2
Washing machine	3

Range	65,000
Clothes dryer	35,000
Water heater, 30 gal. Capacity	30,000
Water heater, 40 to 50 gal. Capacity	50,000
Log lighter, residential	25,000
Barbecue/grill	50,000
Miscellaneous:	
Gas engine, per horsepower	10,000
Bunsen burner	30,000
Log lighter, commercial	50,000
Steam boiler, per horsepower	50,000

TROUBLESHOOTING-WATER HEATERS

Problem	Analysis	Action
Condensation	Heater is installed in a closed or confined area	Vent room or install louvers to allow more air circulation
High operating costs	Lime, rust or sediment in tank	Drain and flush (replace heater if buildup is severe)
	Heater too small for application	Replace with larger heater
	Wrong size piping connections	Install correct size piping
	Lack of insulation on piping	Insulate pipes
Relief valve drips	Excessive temperature setting	Lower setting on thermostat
	Defective valve	Replace valve
Rusty hot water	Buildup of rust in heater	Drain and flush (replace heater if buildup is severe)
Water tank leaks	Rusting of inner tank walls causing pin holes	Replace heater (repairs are only temporary)

TROUBLESHOOTING-ELECTRIC WATER HEATERS

Problem	Analysis	Action
Extremely hot water comes out of faucet	Defective thermostat	Replace thermostat
	Excessive temperature setting	Lower setting on thermostat
Hot water turns cold quickly	Defective upper or lower heating elements	Replace any defective elements
	Defective thermostat	Replace thermostat
	Rust buildup	Drain and flush (replace heater if buildup is severe)
No hot water	Blown fuses or defective circuit breaker	Replace fuses adjust or replace circuit breaker
	Defective heating element(s)	Replace element(s)
	Defective thermostat	Replace thermostat
	Defective time clock	Replace time clock

TROUBLESHOOTING-GAS WATER HEATERS

Problem	Analysis	Action
Extremely hot water	Defective gas control valve	Replace gas control valve
	Defective thermostat	Replace thermostat
	Excessive temperature setting	Lower setting on thermostat
Gas smell is detected	Hole in fittings, connections, valves or flue	Replace any defective or worn parts; tighten loose connections
No gas	No gas coming in to burner	Check valves and adjust or replace
	Defective thermo-coupling	Replace thermo-coupling
	Dip tube installed incorrectly or defective	Reinstall or replace tube
Water turns cold quickly	Dip tube in wrong inlet or broken	Insert tube in cold water supply or replace tube
	Gas controller defective	Replace all defective parts
